

PROFESSIONAL SUMMARY

Go Systems Engineer building backend infrastructure, Telegram/MTPROTO tooling, developer tools, and AI-agent workflows. Strong focus on **API design**, generated type systems, **database tooling**, reproducible environments, and shipping reliable open-source software. Based in Basra, Iraq — open to remote roles.

EXPERIENCE

Open-Source Engineer2021 – Present

Independent

Designing and maintaining Go-based backend and developer tooling projects. Building MTPROTO clients, database utilities, process managers, terminal applications, and reproducible NixOS environments. Focused on clean API design, performance, and developer experience.

KEY PROJECTS

MTGoGo, MTPROTO, Telegram

Go MTPROTO client for Telegram bots and userbots. Features a generated TL type system, SQLite session storage, middleware and plugin architecture, and robust update handling. Designed with a focus on developer API quality.

RunixGo, DevOps, System

Polyglot process manager and application supervisor with CLI, TUI, Web UI, and MCP server. Built as an infrastructure and developer tooling project in Go, supporting AI-agent workflows and sandboxed process management.

dbview & bridge-dbGo, SQL, NoSQL

Terminal database viewer supporting multiple backends for developer productivity, and a CLI tool for moving/bridging data between SQL and NoSQL databases with checkpointing, resume, and SSH tunneling support.

NixOS ConfigurationNix, DevOps, Linux

Reproducible NixOS development environment with declarative system configuration, developer tooling setup, and infrastructure-as-code for personal workstations. Demonstrates systems-level ownership and environment reproducibility.
